COMPANY PROFILE

Alliance Enterprises, Inc. (Alliance) was founded in 1981 with the objective of providing quality consulting, training and system development services to business, government and education organizations. Alliance is comprised of diverse individuals with extensive experience in a variety of technologies.

Alliance has worked in more than 40 state, county and city agencies in sixteen states on development projects encompassing vocational rehabilitation, drug and alcohol rehabilitation, accounting, grants management, automated tax payment, transportation construction management and traffic engineering.

Alliance assists clients in streamlining business practices, provides clients with cutting edge, user-friendly, interactive technology solutions, and facilitates and simplifies the “change process.”

Today, thousands of personnel use an Alliance-developed information and management system every working day of the year. Alliance maintains on-going contracts in support of these systems with its customers.

VR CASE MANAGEMENT SOLUTIONS

Discover why so many Vocational Rehabilitation agencies have put their trust in Alliance Enterprises, Inc. as the leader in VR case management software.

GET AWARE[®]

VR Case Management System

Designed by and for public vocational rehabilitation agencies.

DESIGN

AWARE was designed by and for service providers. *AWARE* resulted from the combined efforts of over 1,000 professional agency staff that worked along side Alliance in defining the features, look and feel, and technical architecture of the software.

Today the *AWARE* national Users Group continues to be actively involved in prioritizing new features and assisting with the design of enhancements.

AWARE is designed around the natural flow of the case process.

AWARE functions intuitively and navigation throughout the system is easy. It works proficiently with screen readers and voice input software.

SYSTEM FEATURES AND BENEFITS

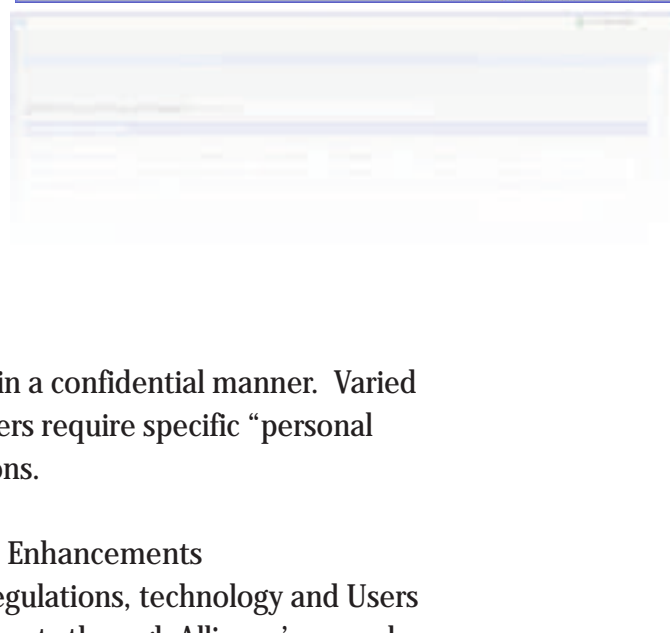

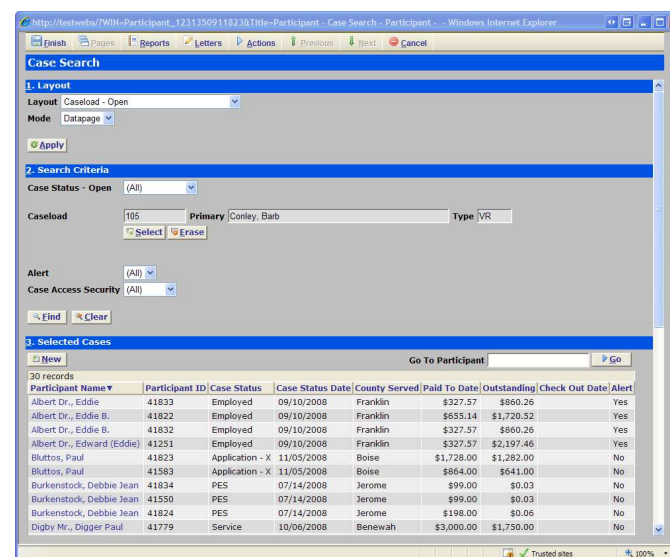

R Accessibility
Provides accessibility for individuals with disabilities and for personnel from remote locations.

R Simplicity
Screens are logical, consistent, sequential and streamlined. Provides real-time reporting. Web-based architecture minimizes workstation installation.

R Accountability
Incorporates internal and federally required data, regulations and reports through computer rules and transaction logging.

R Security
Maintains secure case data in a confidential manner. Varied security levels. Staff members require specific “personal security” to perform functions.

R On-Going Upgrades and Enhancements
Stays current with federal regulations, technology and Users Group prioritized enhancements through Alliance’s annual Upgrade, Maintenance and Support program.

TECHNOLOGY

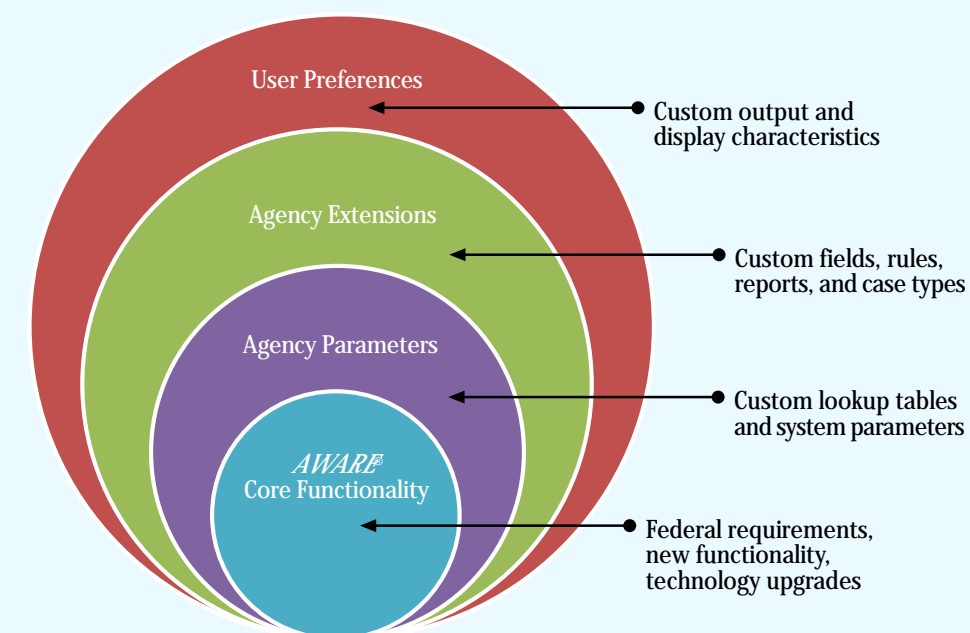

AWARE is a true web-based computer system using proven technologies. An authorized user workstation only needs Internet Explorer to access the system. The workstation connects to the central web and database server using the existing LAN/WAN or dial-up connection. This scalable, “thin client” architecture simplifies distribution, workstation maintenance and software upgrades, offering a cost-effective solution for any size organization.

CUSTOMIZATION

AWARE can easily be adapted by an organization to closely conform to their business practices and procedures.

The system has many lookup tables and parameters incorporated into its architecture. When the scope of these parameters has been exhausted, extensions can be developed to add custom fields, rules and reports without impacting the ability to upgrade the system over time.

The “*AWARE* Implementation Program,” developed by Alliance, provides the support needed to successfully adopt the system. The Alliance Implementation Team provides extensive training for case service and technical staff on how to use and customize the system. Alliance also provides programming services for converting data and developing fiscal interfaces.

“...Alliance has been a truly outstanding partner on this journey and a true partner in the achievement of the goal. Bravo to you and all the members of your world-class organization!”

Robert A. Burns, Assistant State Superintendent, Maryland Division of Rehabilitative Services
